

## Kingdom Trust Account Number Documentation

The purpose of this REST API is to outline duties required and provide sending JSON strings and values for sending the Kingdom Trust Account Number.

### Outline of Duties Required

1. What is required for Kingdom Trust to create and provide is:
  - A. A whitelisted static IP address.
  - B. API Json strings and values sent to include the newly created Kingdom Trust Account Number.
  
2. What is required for you to create and provide is:
  - A. API URL – must use https (SSL).
  - B. API Authentication Credentials - either basic authentication or using an API unique key.
  - C. API POST Method for the receiving of the Json strings and values sent from Kingdom Trust.
  - D. API Response(s) error and/or success.
