

## Blockchain Fork Policy

If you hold digital assets inside your IRA, you may be the recipient of additional digital assets through blockchain network forks from time to time. Kingdom Trust aims to support these events provided it has the technology and resources to do so and has been examined in accordance with Kingdom Trust's policy regarding decisions on digital assets to be custodied.

However, Kingdom Trust does not control these events, and may not be able to store, access and/or provide a trading venue for the new asset(s) resulting from a fork. Furthermore, these capabilities may take an undefined amount of time to develop and are not guaranteed to be developed.

Support for forks are evaluated on a case-by-case basis on many factors, including but not limited to: 1) client interest in the new asset(s); 2) value, liquidity and market structure of the new asset(s); 3) regulatory, legal and compliance considerations surrounding the new asset(s); and 4) administrative feasibility of supporting the fork and associated asset(s) for clients.

You understand this policy and acknowledge that by holding digital assets inside your IRA you are not guaranteed to receive additional digital assets through blockchain forks, and hereby indemnify and hold Kingdom Trust harmless from any and all damages and claims arising from or in connection with blockchain forks or similar events involving the distribution of digital assets and the associated asset(s).

## Airdrop Policy

Kingdom Trust is unable to facilitate airdropped assets on behalf of IRA clients based on current IRS guidelines.

Specifically, it is our determination that there is a risk of disqualifying clients' entire IRA by distributing airdropped assets to them, in any manner. Barring additional guidance from the IRS on this matter, this is Kingdom Trust's standing policy.
